

Problem 2 – Students Laboratories

Statement

A teacher coordinates laboratory works at a discipline. Develop a software system to help the teacher for the management of laboratory activities.

The program will allow:

- a) adding a new student (registration number, name, group);
- b) assignment of the laboratory and adding a new grade for a student (laboratory date and number, problem number, received grade);
- c) listing of the students that have passed the laboratory (grade ≥ 5), ordering the students by groups.

To do

- Design and implement a Java application for the given statement problem.
